The Scarlett MixControl software enables you to create six separate mixes with ultra-low-latency. Route any combination of input signals and sequencer outputs to any of the Scarlett 8i6 outputs. Intuitive one-click configurations help you track, monitor and mix as quickly as possible. The MixControl software features 36 built-in channel strips, complete with filters, effects, panning, volume control and monitoring, that each have separate L and R bus levels and tap-offs. You have control of outputs from 18 of the best sounding mic preamps in the world, on-board format converters, EQ, compression, reverb and dynamics

processors, and the perfect audio interface processor. The Scarlett 8i6 has no analog I/O connectors. All I/O and analog signal paths are routed directly to and from the DSP. This means the audio interface section doesn't introduce any latency, and you have full control of your mix. The mixer interface has an XLR input and output for microphone use, with 4 balanced line outputs, as well as 4 XLR line outputs, 1 TRS line output and 1 headphone output. There's also a TRS line output to the DAW so that you can use the Scarlett 8i6 as a source. The 8 input channels have dedicated 4-band parametric EQ and Reverb/Delay. It also features 24-bit Digital to Analog Converter for all channels. The Scarlett 8i6 also features microphone preamps which

are based on the ADAM mic preamps. With 24 bit, 44.1 kHz digital inputs, 44.1 kHz digital outputs and an extensive amount of gain and EQ, the Scarlett 8i6 was built to easily capture the highest quality audio. It includes Focusrite SoloLink Universal so you can also connect directly to any Focusrite SoloLink enabled recorder, desk, or plugin without the need for additional cables. You have a choice of whether to record via the Scarlett 8i6's onboard digital I/O or use an external interface such as Focusrite's BlackFire USB interface or external USB microphone. You can record to the Scarlett 8i6 without a computer, via the included Focusrite iConnect app. Design The Scarlett 8i6 is an 8 in / 6 out audio interface with outstanding sonic performance and

flexibility at a truly affordable price. With the Scarlett 8i6 you get an 8 in / 6 out USB interface. It has

Fascinated by music and the creative world around him, Thomas McEwan made an early decision to become a sound engineer. In 1989 he relocated to London and began studying sound engineering at Middlesex Polytechnic, graduating with a 1st class honours degree. After completing various lectures and assisting in the studios at a number of London-based radio stations, he was fortunate to secure a job at ZZ Top's Bunker Studios in

West London, where he worked as Assistant Sound Engineer. It was during this time that he met Keith Waterhouse, and joined the band as Studio Sound Supervisor in 1992. This early experience was followed by a succession of studio and production jobs, culminating in a post as Digital Audio Tape operator at London's famous Maida Vale Studios. It was here that Thomas met Jim Henson and helped out on the Jim Henson film Toby's Life and the HBO/BBC show, Murder, She Wrote, among others. Thomas moved to the UK in 1997, and in 2000 was employed by CTS (Focusrite's parent company) to work on the company's Studio Artist Recording Pack. It was here that he met Martin Cooke and was given the responsibility of sound engineering for

a number of the Focusrite's instruments, including the Mark 8 and the Scarlett. The first Scarlett's arrived in 2002, as Thomas was looking for a portable recording rig to use in his home studio. He also used the Scarlett to record all the vocals in Jim Henson's feature film, The Storyteller. In 2004, CTS announced a new production facility for Focus

What's New In Scarlett MixControl?

- Six distinct audio tracks
- One track for vocal/acoustic guitar/Dmx/track 2

- One track for drums/bass/track 3 •
- One track for percussion/track 4 •
- One track for piano/track 5 •
- One track for electric guitar/track 6 •

Each track can be routed to any of the input/output selections All the SC68i6s are equipped with Focusrite's acclaimed Focusrite AudioMonitor 2 headphone monitors for studio monitoring, and they can also be used for headphone monitoring, as the headphones feature the same frequency response as Scarlett's outputs. A handy, feature-packed remote control is included, letting you control the console from any location. There is also a built-in USB to 48V Phantom Power supply for supplying sound to any instrument that has a power supply with a 48-volt phantom power plug. The SC68i6 provides 48V

Phantom Power in combination with a 48-V Auxiliary Input (AUX), AUX In/1, In/2, and a built-in 48-V Main Power Supply (MS). 48-V Phantom Power The SC68i6 is equipped with a 48-V Phantom Power Supply, allowing audio accessories to be used as 48-V phantom powered instruments, such as electric guitar amplifiers, keyboards, vocal microphones, and digital mixers. In addition to onboard phantom power, a 48V Auxiliary Input (AUX) is provided, allowing the SC68i6 to be connected to a 48-V Auxiliary power supply, such as one provided by a PA system, if desired. When used together, a 48-V Phantom Power supply and an external 48-V power supply provide a total of 96V, while using the onboard 48V power supply is also available. 48-V Auxiliary Input

The SC68i6 features a 48-V Auxiliary Input that allows 48V power to be passed to an attached audio accessory. This allows the SC68i6 to be connected to a 48-V PA system, such as a PA system provided by a mixing console, if desired.

48-V Main Power Supply The SC68i6 features a built-in 48-V Main Power Supply. This allows the SC68i6 to be used as a power supply for a drum kit, a keyboard or an electric guitar and/or bass amplifier. If desired, a separate 48-V Auxiliary power
